PublicTechnology

[PublicTechnology](#) [1] highlights the transformational impact of technology on the front-line and back-office functions across the whole public sector, from local and central government to healthcare providers and the blue light services.

It provides breaking news, analysis, features and interviews on the data, digital and technology issues that matter most to public sector workers, from culture changes related to digital transformation to cloud computing and cyber security.

The site is for anyone who works in digital, data and technology, but because we cut out the unnecessary jargon it's also accessible and understandable for those civil servants and public sector workers that simply want to get to grips with the government's massive digital transformation programmes.

Make sure you don't miss a story by registering for daily email bulletins for all the latest public sector digital news and for breaking news alerts. You can also join our rapidly growing readers' community by commenting on articles, discussing content on our Twitter and Facebook channels, and sending in ideas and opinions to our editorial team.

[Sign up to PublicTechnology here for free daily updates](#) [2] on the issues facing UK local authority ICT professionals.
